we're on it.

Ink and dampening roller packages for your Sprint printing presses – We bring colour to your work!

The inking and dampening units are the heart of any printing press. A reproducible, high-quality print result is always dependent on an optimally equipped inking and dampening unit. If the inking and dampening rollers are worn or otherwise out of line with the special challenges of metal decorating, problems with the print quality are inevitable, due to an inhomogeneous ink and dampening solution film. Increased cleaning requirements and increased waste are further consequences. In this case, the rollers must be replaced to restore the accustomed print quality. All our ink and dampening rollers are manufactured using specially developed materials and are characterised by the unique rubber-metal bonding. This guarantees outstanding dimensional stability and a long service life for the rollers. At the same time, an ink-water balance is achieved quickly and remains stable even over long runs.

The result: High-quality print products with minimised streaking and less waste over an extended period of operation.

As the chemical properties of inks and solvents for conventional printing differ completely from those for a UV process, we offer our ink and dampening rollers with specially adjusted rubber compounds for both conventional and UV-cured inks. But whether for UV or conventional printing, our roller packages are your key to reproducible, high-quality print results, excellent washing properties, a long service life and reduced waste.

Our recommendation

Replace the ink and dampening rollers of your Sprint metal decorating press now. To aid your decision we produced a limited number of Rollers at surprisingly favourable conditions.

We would be pleased to send you an individual offer quoting an attractive price.
