

UPGRADE 1.3

 KBA-MetalPrint

Electromagnetic Rear Edge Sheet Separation System

METALWING and METALSTAR 1

Excellent production security!

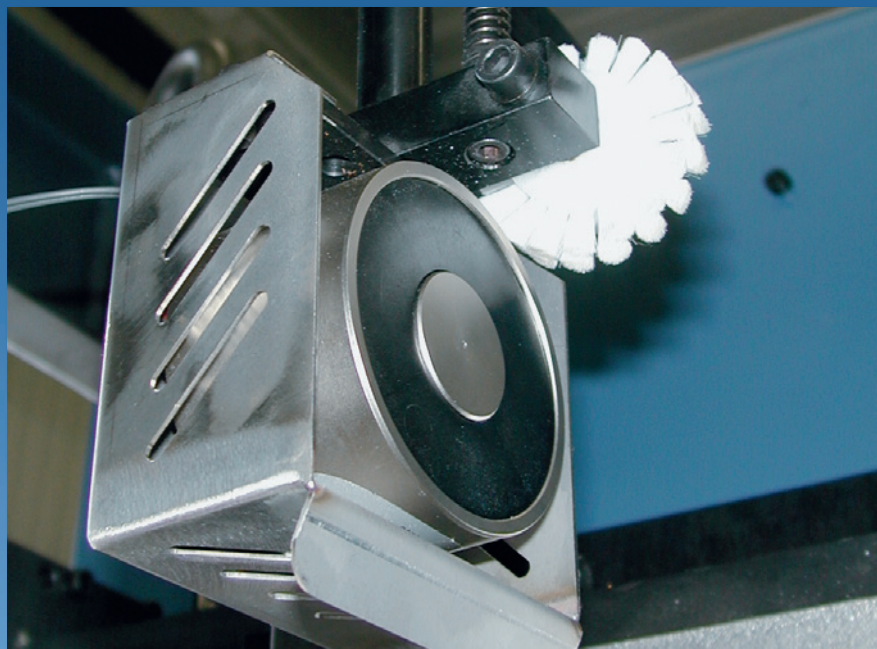

The Advantages

- Consistent sheet feeding – even on poor quality stacks
- Secure magnetic sheet separation
- Automatic engagement as production starts
- Reduced compressed air consumption

Your Benefit

- Improved quality and higher production speed
- Minimization of faults improving productivity
- Assembly and forget
- Cost and noise reduction

The electro magnets ensure that the air blast system can produce good sheet separation even on poor quality stacks. This ensures that the sheets are held uniformly, don't stick together and the volume of compressed air needed can be reduced. It also allows production speeds to be increased with much smoother transportation of the sheets resulting in greatly reduced spoilage.

Depending on the technical configuration of your equipment, we can offer a comprehensive consultancy service which will include supplying you with a quotation specifically tailored to your needs.
