

UPGRADE 4.2

 KBA-MetalPrint

Front Lay Sensors

For all SPRINT multi-colour printing machines

Increase your production flexibility and security!

The Advantages

- Reduction in production stoppages by reliable sheet sensing
- Four instead of two format-detection sensors
- Recognition of low reflective sheets
- Maintenance free operation

Your Benefit

- Accurate sheet monitoring, higher productivity
- High flexibility on the formats
- Multiple use of waste sheets, Cost reduction
- Cost saving

Now, four active sensors instead of the previous two format-dependent sensors recognize the incoming sheet ensuring constant sheet monitoring.

As on each side, at least one sensor has to be covered, the system can handle a wide variety of scroll sheet formats and an improved sensor technique enables the reliable recognition of pre-processed sheets.

Depending on the technical configuration of your equipment, we can offer a comprehensive consultancy service which will include supplying you with a quotation specifically tailored to your needs.
