

Fine adjustment of the coating cylinder for the transverse recess

For types 4040 and 470 coating machines

Ideal solution!

The fine adjustment of the circumferential register serves to position the transverse recess of the coating cylinder exactly. The two friction discs are replaced by two toothed adjustment wheels. This eliminates the slip, and exact positioning of the coating cylinder, down to 0.1 mm, is possible straight away. There is no further need for any repeated, time-consuming corrections.

This upgrade is suitable for all 4040 and 470 type coating machines.

The advantages	Your benefit
<ul style="list-style-type: none"> Fast, reliable adjustment of the circumferential register No slip by the coating cylinder during adjustment 	<ul style="list-style-type: none"> Shorter set-up times
<ul style="list-style-type: none"> Exact setting through toothed adjustment wheels 	<ul style="list-style-type: none"> Exact position of the transverse recess – higher quality

Depending on the technical configuration of your equipment we can offer a comprehensive consultation service. We will be pleased to supply you with a quotation tailored to your specific needs. Please feel free to contact us.
