

# Safety device with pneumatic lowering

## For LTG unloading machines

### Safety is what counts!

The existing safety device using cables and springs is replaced with a new transport unit comprising aluminium rollers and vacuum sheet accelerators with a separate motor drive. The new safety device is held in position or is swung downwards by a practically maintenance-free pneumatic cylinder. Line safety is further enhanced by sensor monitoring and fine adjustment by way of pressure regulators.

This retrofit incorporates the pneumatic chain tensioning device of Upgrade 6.9.

For LTG unloading machines manufactured up to 1995.

Upon request.

The advantages	Your benefits
<ul style="list-style-type: none"> <li>Controlled sheet transport out of the unloading machine</li> </ul>	<ul style="list-style-type: none"> <li>Less waste</li> </ul>
<ul style="list-style-type: none"> <li>Pneumatic pressure control instead of springs</li> </ul>	<ul style="list-style-type: none"> <li>Increased safety</li> </ul>
<ul style="list-style-type: none"> <li>Fewer mechanical parts</li> </ul>	<ul style="list-style-type: none"> <li>Lower maintenance outlay</li> </ul>
<ul style="list-style-type: none"> <li>Pneumatic chain tensioning</li> </ul>	<ul style="list-style-type: none"> <li>Longer service life of the transport chain</li> </ul>

Pneumatic unit with two pressure regulators

Depending on the technical configuration of your equipment we can offer a comprehensive consultation service. We will be pleased to supply you with a quotation tailored to your specific needs. Please feel free to contact us.
