

# Dynamic sheet accelerator

## For LTG unloading machines

### Accelerate your production with power and quality!

As the cured sheet comes out of the drying oven it is essential that it is carried off the wickets quickly and consistently without damage. The dynamic sheet accelerator system achieves this by firmly gripping the sheet using the latest vacuum technology and then accelerating it under precise control out of the wicket area placing it in a consistent position on the outgoing conveyor. This has the advantage of reducing scratching and corner damage on the sheets as well as allowing the line to run reliably at higher speeds.

Suitable for all LTG drying ovens.

Upon request.

Depending on the technical configuration of your equipment we can offer a comprehensive consultation service. We will be pleased to supply you with a quotation tailored to your specific needs. Please feel free to contact us.
