

# UPGRADE 7.1

## Burner control For LTG ovens

### Continuous flame monitoring safety system!

This new burner control replaces the now obsolete R 4341 and R 7241 models which are no longer available.

The new burner control system conforms to all current safety regulations. The burner flame is constantly monitored by a self-monitoring system. An ergonomically designed display shows the latest operation status, error messages and the flame current signal thereby eliminating the need for a separate flame current gauge.

The advantages	Your benefit
<ul style="list-style-type: none"> <li>Self-checking continuous burner flame monitoring system</li> </ul>	<ul style="list-style-type: none"> <li>Smooth production combined with maximum safety level</li> </ul>
<ul style="list-style-type: none"> <li>Full time self checking system means no need for 24 hrs safety shutdowns</li> </ul>	<ul style="list-style-type: none"> <li>No forced production stops, increase of productivity</li> </ul>
<ul style="list-style-type: none"> <li>Clear indication of current program position</li> </ul>	<ul style="list-style-type: none"> <li>Time saving by fast and user friendly interface</li> </ul>

Depending on the technical configuration of your equipment we can offer a comprehensive consultation service. We will be pleased to supply you with a quotation tailored to your specific needs. **Please feel free to contact us.**
