

Conversion kit for noise reduction

For type 770 and 4050 feeders

Noise damper!

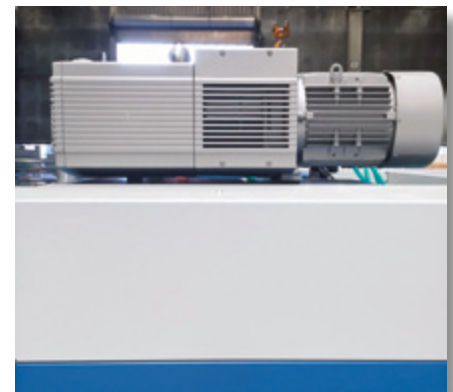

Through the use of new noise-reducing air outlet nozzles, working around the feeder is now more pleasant. The compressed air and vacuum generators are also replaced to achieve further noise reduction. This significantly reduces noise exposure in the printshop – a contribution towards compliance with noise regulations. The new vacuum generator is also a dry runner, which means that oil check and oil change intervals no longer apply.

This upgrade is suitable for all type 770 and 4050 feeders.

The advantages	Your benefit
<ul style="list-style-type: none"> Reduction of the noise level 	<ul style="list-style-type: none"> Lower noise exposure for the operator
<ul style="list-style-type: none"> Oil check and oil change intervals of the vacuum generator no longer apply 	<ul style="list-style-type: none"> Service-friendly and low-maintenance
