

Continuous pile lift

For type 4050 and 780 feeders

Optimise your feeding operations!

Through the installation of the continuous pile lift, the distance between the top edge of the pile and the suction unit is always the same. This reduces jams in the feeder, because it becomes less likely that the front edge of the sheet should catch at the entrance to the feed table. The drive motor with mechanical brake is replaced by an inverter-controlled motor, which – in compliance with the provisions of directive DIN 13849 – also assumes the braking function.

This upgrade is suitable for type 4050 and 780 feeders.

On request.

The advantages	Your benefit
<ul style="list-style-type: none"> Continuous infeed of the plate pile 	<ul style="list-style-type: none"> Fewer jams Improvement in quality and productivity
<ul style="list-style-type: none"> Especially recommended for aluminium and for scroll sheets 	<ul style="list-style-type: none"> Greater flexibility
<ul style="list-style-type: none"> No mechanical motor brake required 	<ul style="list-style-type: none"> Reduction of maintenance

Inverter drive

Depending on the technical configuration of your equipment we can offer a comprehensive consultation service. We will be pleased to supply you with a quotation tailored to your specific needs. Please feel free to contact us.
