

Side blast air

For type 4050 and 780 feeders

Optimise your feeding operations!

Through the installation of side blast air nozzles, an air cushion is created between the plates at the front of the pile area. The improved separation of sheets reduces the number of jams, particularly in the case of sheets with high adhesion. The position of the nozzle can be adjusted laterally and in height.

This upgrade is suitable for all type 4050 and 780 feeders.

The advantages	Your benefit
<ul style="list-style-type: none"> Improved separation of the sheets 	<ul style="list-style-type: none"> Number of waste sheets reduced to a minimum
<ul style="list-style-type: none"> Fewer jams 	<ul style="list-style-type: none"> Higher production speed possible

Depending on the technical configuration of your equipment we can offer a comprehensive consultation service. We will be pleased to supply you with a quotation tailored to your specific needs. Please feel free to contact us.
