Upgrade 10.2

Ball Bearings for Rollers on the Coating Machine – Keep Things Running Smoothly!

At Koenig & Bauer, we are working continuously on innovations to further improve your printing and coating lines. With our hardware upgrades you stay up-to-date with the latest technological developments. In that way you continue to decorate metal sheets to the highest standards.

Old: plain bearings

New: high-precision ball bearings

The fountain and pressure rollers within the coating machine are decisive for a continuous and even application of coating. Therefore we recommend to replace the conventional high wear and high maintenance plain bearings by high-precision ball bearings with zero clearance. In that way you can improve your production quality simply by changing the bearings. At the same time the need for daily lubrication of the plain bearings is eliminated.

Existing rollers can be re-used after the bearings have been exchanged.

We would be pleased to send you an individual offer quoting an attractive price.

Your benefits

- Highest production quality
- Less waste sheets
- More uptime and reduced running cost due to the use of maintenance-free and durable ball bearings

The ball bearings for the rollers on the coating machine are available for the coating machines 430 and 460.

Installation and commissioning of the upgrade to be performed by a qualified service technician from Koenig & Bauer. The labour, travel and accommodation costs, as well as daily travel allowances for the technician, will be charged separately as incurred.

Errors and omissions excepted.
