we're on it.

Upgrade 5.3 Delivery with Round Belts – Keep it Clean!

At Koenig & Bauer, we are working continuously on innovations to further improve your printing and coating lines. With our hardware upgrades you stay up-to-date with the latest technological developments. In that way you continue to decorate metal sheets to the highest standards.

The delivery system moves the coated sheets to the loading machine of the dryer. By using round belts instead of conventional flat belts the contact surface of the coated sheets is minimised. Thus, the backs of the sheets remain clean from dirt accumulation and varnish residues on the belts. Furthermore, the delivery with round belts ensures a stable and trouble free sheet transportation. Moreover, make-ready times are further reduced as the format change is simplified by lateral adjustment of the guide rollers.

Your benefits

- Higher production quality due to clean sheets without contamination from the belts
- More productivity due to stable sheet transportation
- Shorter make-ready times due to simplified format change

The delivery with round belts is available for coating machines 4040 and 470 (machine no. 470-001 to 470-091).

We would be pleased to send you an individual offer quoting an attractive price.
