Upgrade 6.6

Magnetic Overhead Brake MagStack for Single and Double Stackers – Get a Head Start!

At Koenig & Bauer, we are working continuously on innovations to further improve your printing and coating lines. With our hardware upgrades you stay up-to-date with the latest technological developments. In that way you continue to decorate metal sheets to the highest standards.

The surface of a printed or coated metal sheet is extremely sensitive. Especially at the stacking stage, there is a significant risk of scratches or other damages which could impair the quality of the printed or coated sheets.

Therefore, we have developed the magnetic overhead brake. The sheets are carried over the stacker box by an overhead magnet system and slowed-down from full transportation speed to a controlled stop before they fall vertically onto the stack with great precision. Thereby the sheets are supported by an air cushion as they drop. The result: a perfect evenly formed stack without damages, also when using thin sheets or scroll sheets at high speeds. As there are no more stacker fans and spring-loaded sheet buffers the system works with low-noise and virtually maintenance-free.

Your benefits

- Highest production quality, especially when re-using the sheets in subsequent lines
- Higher productivity due to higher production speed
- Easy operation

The magnetic overhead brake MagStack is available for single and double stackers (both boxes) of type 217, 803 and 804. Versions for special formats are available upon request. We are happy to help.

We would be pleased to send you an individual offer quoting an attractive price.
