we're on it.

Upgrade 7.1 New Burner Control – Safety First!

At Koenig & Bauer, we are working continuously on innovations to further improve your printing and coating lines. With our hardware upgrades you stay up-to-date with the latest technological developments. In that way you continue to decorate metal sheets to the highest standards.

Burner control systems are one of the core components of every sheet drying oven. The durability of our printing and coating lines is legendary. However, electrical components become in many cases unavailable in the market and certain software is no longer supported. For that reason we have developed suitable upgrade packages.

For the sheet drying ovens this applies especially to the burner control. This self-monitoring system checks and controls the burner flame constantly by UV-feelers, without forced stops or safety shutdowns. From the display the operational modes, the flame current signal as well as error messages can be conveniently monitored.

Your benefits

- Maximum safety
- Easy and simple operation
- Higher productivity

The new burner control package is available for all sheet drying ovens. We are happy to advise you individually.

Installation and commissioning of the upgrade to be performed by a qualified service technician from Koenig & Bauer. The labour, travel and accommodation costs, as well as daily travel allowances for the technician, will be charged separately as incurred.

Errors and omissions excepted.
