## Upgrade 8.1

# Stack Height Sensor at the Feeder – You Better Check!

At Koenig & Bauer, we are working continuously on innovations to further improve your printing and coating lines. With our hardware upgrades you stay up-to-date with the latest technological developments. In that way you continue to decorate metal sheets to the highest standards.

Within the feeder an inconsistent or imprecise sheet feeding into the machine may occur from time to time. The consequence: expensive waste sheets or even damage to the equipment and unplanned downtime.

The stack height sensor at the feeder detects the stack height on the rear edge of the top sheet without causing any damages. In this way a perfect stack level regulation and hence a consistent sheet feeding into the machine is ensured, even at high running speeds.

### Your benefits

- Highest production quality
- Less waste sheets
- More uptime and productivity

The stack height sensor is available for feeders of type 730, 732 and 770.

We would be pleased to send you an individual offer quoting an attractive price.
