Upgrade 8.6

Scroll Sheet Guides at the Feeder – Ultimate Guidance!

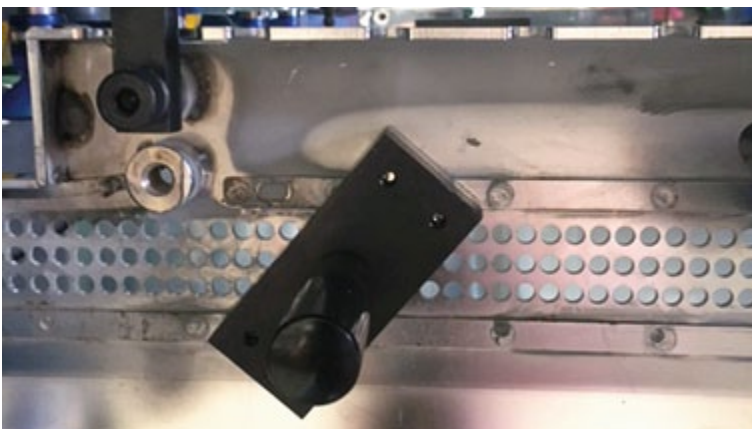

At Koenig & Bauer, we are working continuously on innovations to further improve your printing and coating lines. With our hardware upgrades you stay up-to-date with the latest technological developments. In that way you continue to decorate metal sheets to the highest standards.

Especially when using scroll sheets, the scroll cut outs may get stuck from time to time. The consequence: expensive waste sheets or even damage to the equipment and unplanned downtime.

The scroll sheet guides at the feeder allows optimum adjustment of the feeder to different types of metal sheets. This is achieved by a combination of magnets and separator fingers that can be freely positioned to optimally spread the pile of sheets. In this way a consistent and precise feeding of scroll sheets into the machine is ensured, even at high running speeds.

Your benefits

- Higher productivity
- Less waste sheets
- More uptime

The scroll sheet guides are available for feeders of type 4040 and 780.

We would be pleased to send you an individual offer quoting an attractive price.
