Upgrade 8.8

Sheet Separation Blowers at the Feeder – Get Some Fresh Air!

At Koenig & Bauer, we are working continuously on innovations to further improve your printing and coating lines. With our hardware upgrades you stay up-to-date with the latest technological developments. In that way you continue to decorate metal sheets to the highest standards.

A stable and precise separation of the sheets from the feeder pile determines the production quality with regards to sheet transportation and register accuracy. With additional lateral separation blowers at the front pile corners, the sheet separation in the feeder can be significantly improved. The result: optimised sheet separation and a stable sheet transfer with less machine stops.

Your benefits

- Consistent production quality
- Less waste sheets
- Higher availability and productivity

The sheet separation blowers are available for feeders of type 4040 and 780.

We would be pleased to send you an individual offer quoting an attractive price.

Our special recommendation

Replace now your old oil-lubricated vacuum pump against our new oil-free rotary vane pump. This vacuum pump operates completely dust and oil free and delivers sufficient and non-fluctuating air for a reliable production – sheet by sheet. With only one shaft and its direct drive technology this pump is designed for long life and minimal wear. This reduces unwanted downtime and maintenance requirements of your line. Together with an excellent degree of efficiency and significant lower energy consumption this saves a lot of money to improve your bottom line. To ensure fast and easy installation this original vacuum pump is completely pre-assembled specifically for the operation in our feeders.

Available for feeders of type 770, 780 and 4050.

Installation and commissioning of the upgrade to be performed by a qualified service technician from Koenig & Bauer. The labour, travel and accommodation costs, as well as daily travel allowances for the technician, will be charged separately as incurred.

Errors and omissions excepted.
