Upgrade 9.1

ColorTronic Remote Ink Control System for Mailänder Printing Presses – True Colours!

At Koenig & Bauer, we are working continuously on innovations to further improve your printing and coating lines. With our hardware upgrades you stay up-to-date with the latest technological developments. In that way you continue to decorate metal sheets to the highest standards.

Effectively controlling the ink density is decisive for the quality of the printed image. The ColorTronic remote ink control system developed by Koenig & Bauer MetalPrint eliminates the cumbersome manual setting and readjustment of the ink zones. To achieve this, the operator simply saves the job data for each printing unit in the control panel. With the next print job the settings and eventually necessary corrections are automatically performed via electromotive ink zone adjustment.

The result: faster obtaining the set values, precise and rapid operation as well as higher quality and a stable print run.

Your benefits

- Higher production quality
- Less waste sheets
- Shorter make-ready times
- Lower running cost due to longer service life of the ink duct roller

The ColorTronic upgrade package includes:

- central control console with colour monitor and ISO lighting
- electromotive ink zone adjustment
- a complete ink duct with ceramic-coated ink duct roller

The ColorTronic remote ink control system is available for Mailänder printing presses of type 121, 122 und 122A.

Installation and commissioning of the upgrade to be performed by a qualified service technician from Koenig & Bauer. The labour, travel and accommodation costs, as well as daily travel allowances for the technician, will be charged separately as incurred.

We would be pleased to send you an individual offer quoting an attractive price.
